Magic Camera Introduction

Full Color In Low Lux, No Need IR

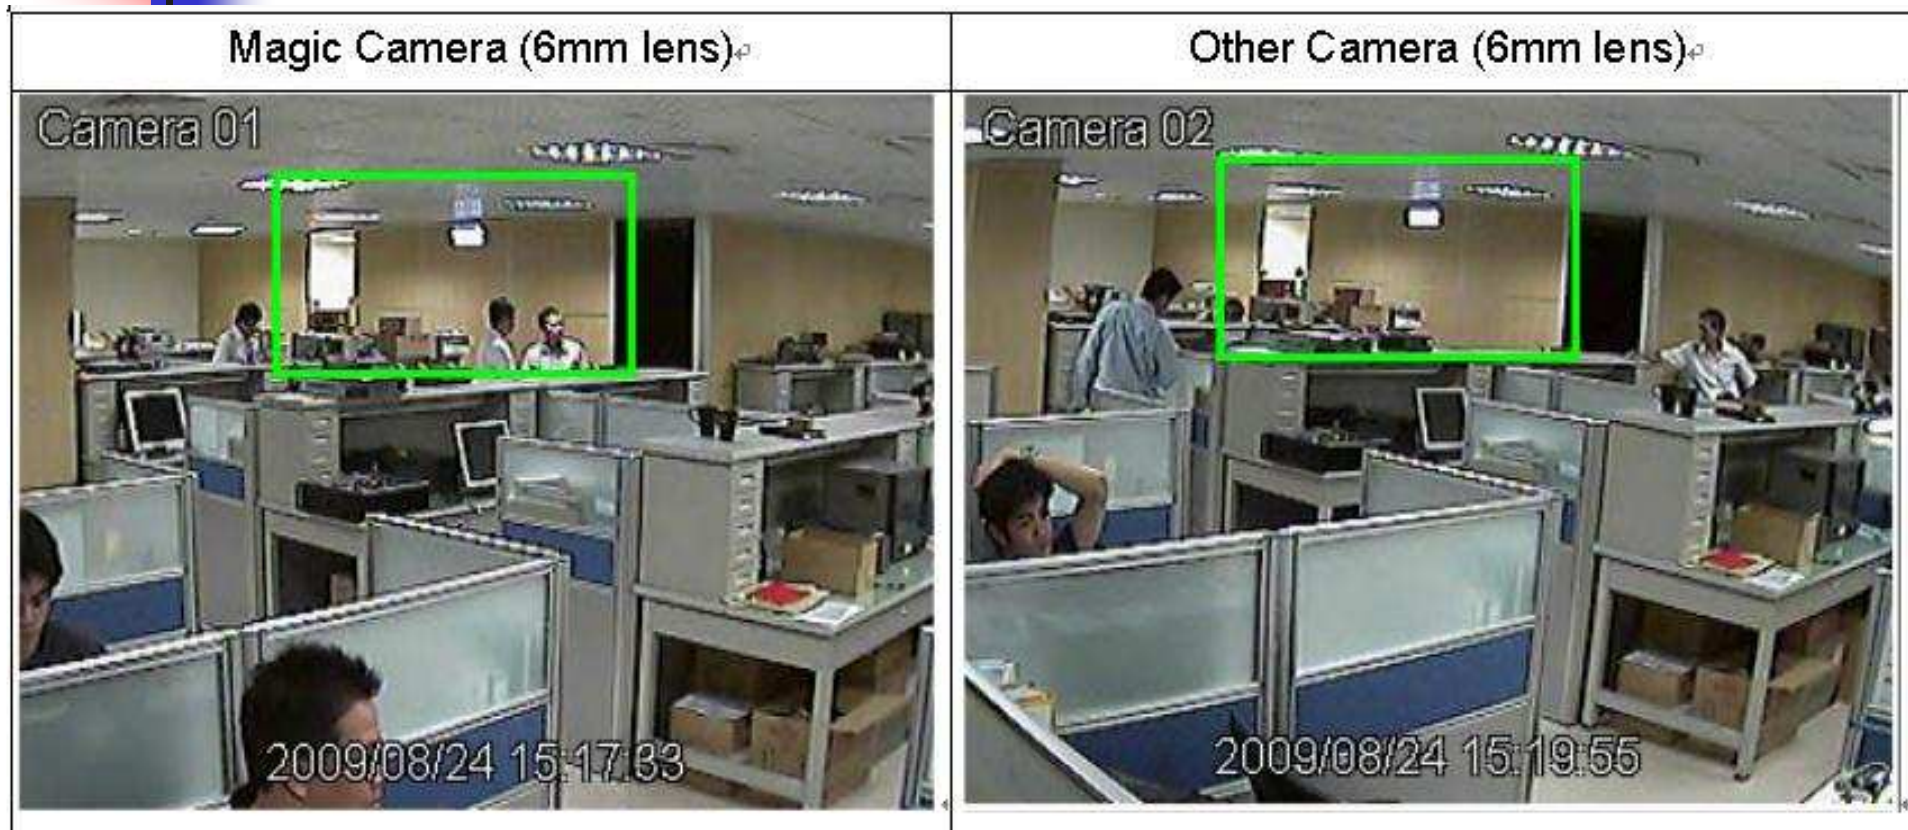

- ▶ Star Light Color Camera
- ▶ Built-in 1/3" CCD High Resolution Color Camera.
- ▶ No IR required in the night time, could also recognize easily and clearly even under faint star light.
- ▶ Without any overheated problem, good for energy conservation and conforms to the environmental protection
- ▶ Horizontal Resolution 420 TV Lines.
- ▶ Colorful pitcher performance.
- ▶ IP66 weatherproof housing
- ▶ Easy for installation

Comparison (I) Outdoor (In the morning)

- 1. In the same image (outdoor & in the morning), the camera01 (Magic Camera) is no difference between the camera02 (other camera), but the camera02 has the apparent curves compared with the camera01 (refer to ①&②).
- 2. In the same image, the camera01 could recognize more lines than the camera02 (refer to ③). And the resolution in the camera01 is better than the camera02.

Comparison (II) Indoor (In the morning)

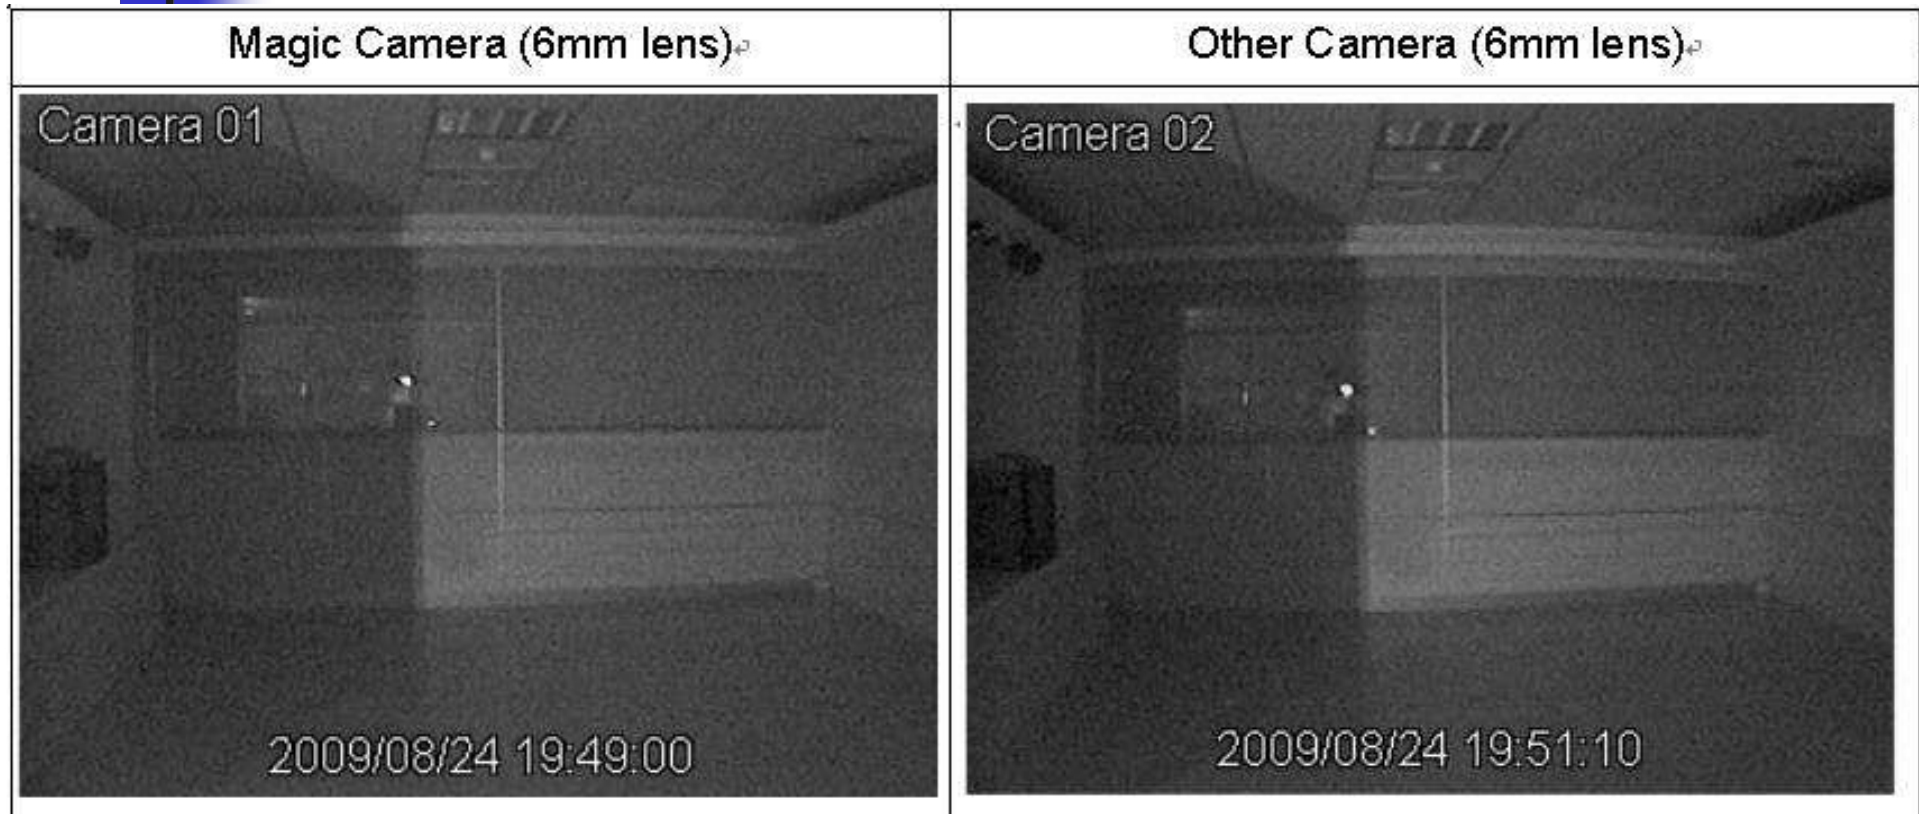

- In the same image (in the office & in the morning), the camera01 could recognize the lines more clearly than the camera02 (refer to the green circle).

Comparison (III) Outdoor (In the evening)

- 1. In the same image (outside & in the evening), the color in the camera01 is better than the camera02. Because the color of the tree in the camera02 became gray, but the color of the tree in the camera01 didn't, and the color in the camera01 still remain the same.
- 2. In the same image, the lines in the camera01 still could be seen clearly, but the lines in the camera02 can not be seen clearly (refer to the red circle).

Comparison (III) Indoor (In the evening)

- In the same image (even in a little light environment & in the office), the camera02 has the apparent curves compared with the camera01. That's means the camera01 could be corner-corrective compared with the camera02.

Magic Camera Information

After referring to the above information about the NTIC Magic Camera, if any problems, please feel free to contact with us and let us know soon ~
